

AI ODMAH ISPORUČI ODGOVOR. ALI NIJE NUŽNO TAČAN.

Cognitive Verifier Pattern (CVP)

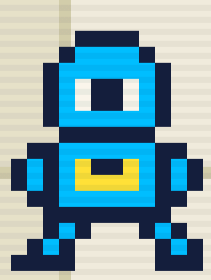

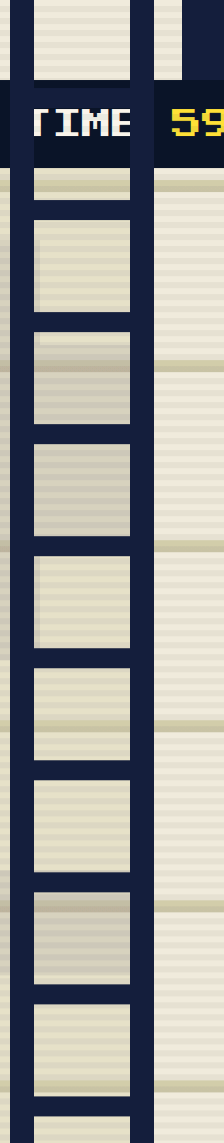

THE BETWEEN FLOOR 2/11 TIME 59:37

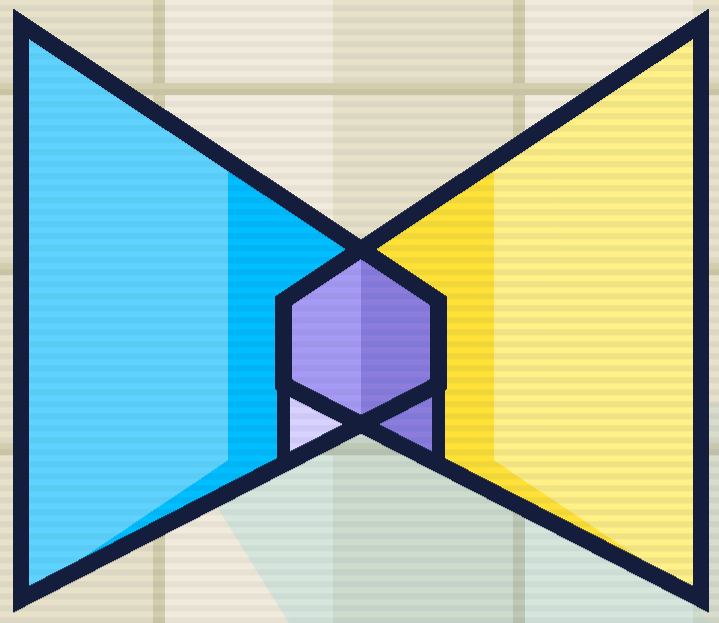

NASTAJE ILUZIJA RAZUMIJEVANJA.

SVRHA CVP-A JE DA USPORI PROCES RAZMIŠLJANJA.

METAXIS

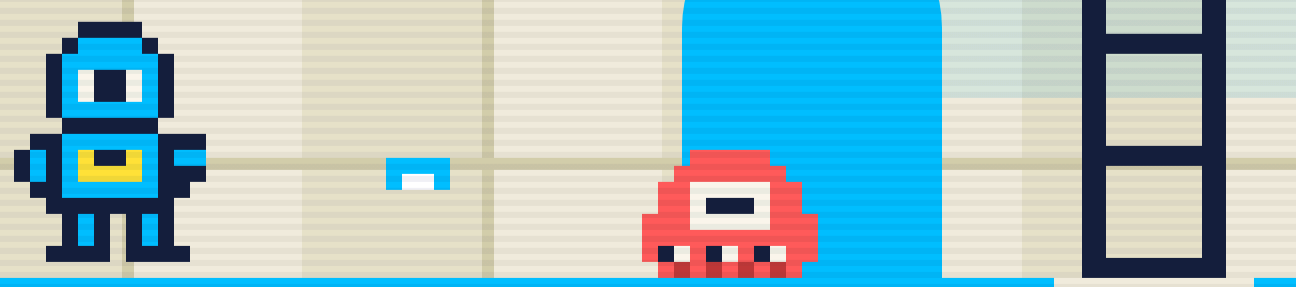

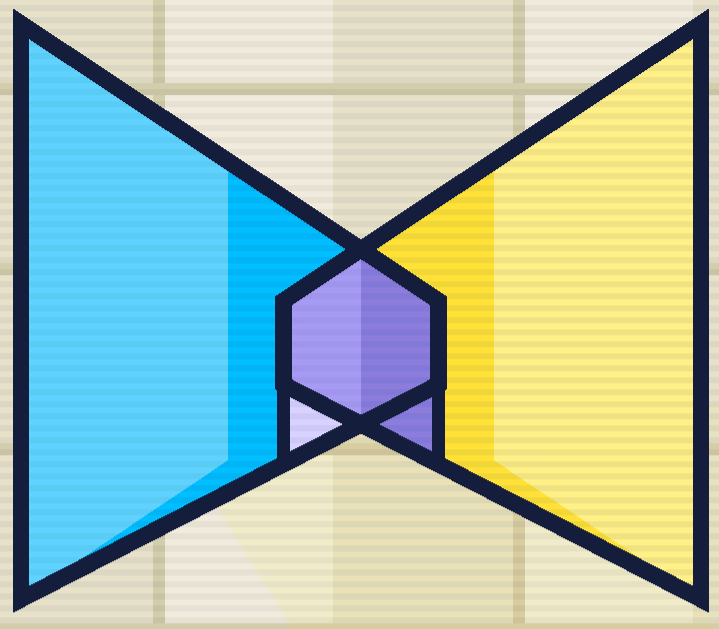

KORAK 1 OD 3

THINK

Pročitaj cilj, trenutno stanje, granice i šta je dostupno.

JOŠ NEMA KONAČNOG ODGOVORA.

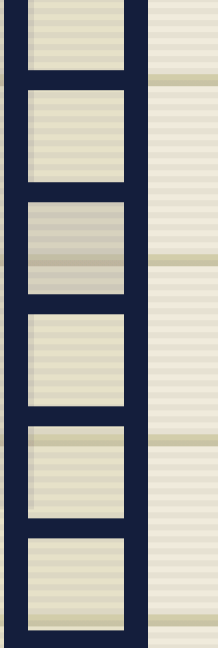

KORAK 2 OD 3

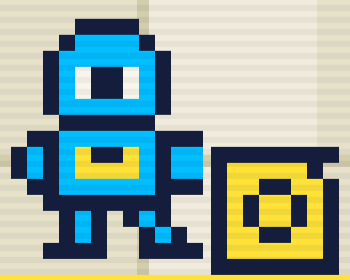

ACT

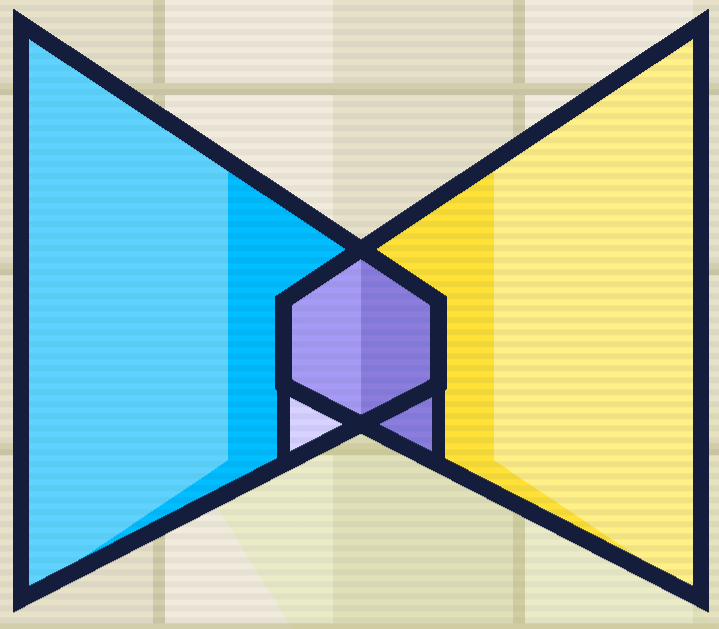

Jedna konkretna radnja. Napiši tekst, pozovi alat, pošalji zahtjev.

JEDNA RADNJA, JEDAN POTEZ.

KORAK 3 OD 3

VERIFY

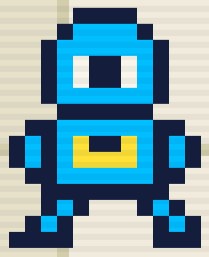

Je li radnja dala očekivani rezultat? Ako nije, vrati se i ispravi.

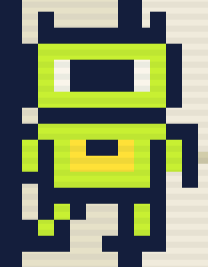

NIKAD NE NASTAVLJAJ NA POGREŠNOJ INFORMACIJI.

CVP u tri koraka

- 1. Podpitanja: šta nedostaje
- 2. Odgovori na podpitanja
- 3. Sinteza u finalni odgovor

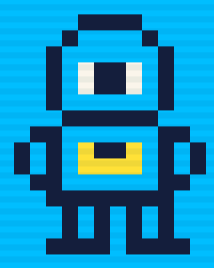

Umjesto da pogađa rješenje, model ga gradi od razjašnjenih dijelova.

GENERATOR

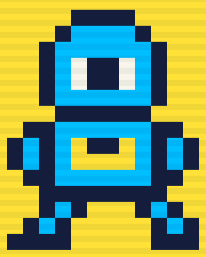

Model dobije pitanje i odmah isporuči odgovor.

ASISTENT

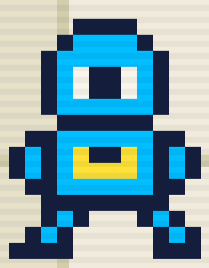

Model razlaže pitanje i provjeri da li je pravilno shvaćeno.

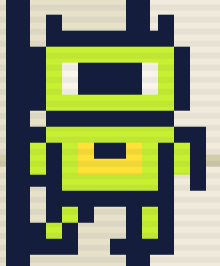

Uloga AI-ja se mijenja.

„KAKO DA TIM RADI BOLJE?"

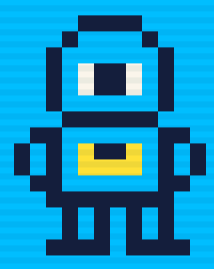

BEZ CVP-A:
LISTA
GENERIČNIH
SAVJETA.

KORISTI

Za odluke i analize gdje pogrešna pretpostavka košta.

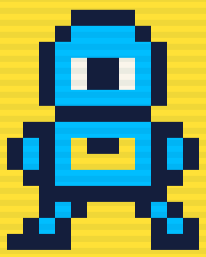

PRESKOČI

Za brze informacije i jednoznačna pitanja.

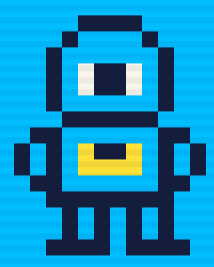

CVP nije samoprovjera. On razlaže tvoje pitanje.

ODGOVOR

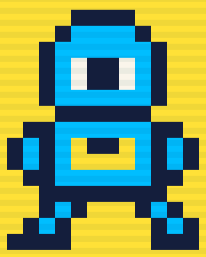

Jedan prolaz. Zvuči pametno. Niko ne provjerava.

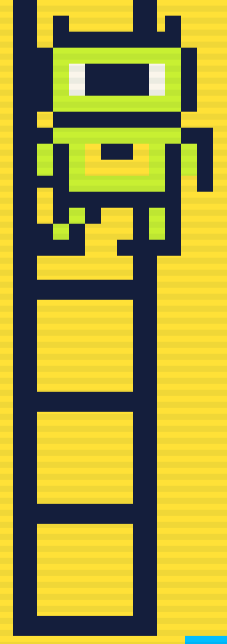

RAD

Petlja. Provjera poslije svakog koraka. Rezultat se vidi.

THE BETWEEN ROOF CLEAR

RAZLIKA NIJE SAMO U ODGOVORU.

NEGO U PROCESU KOJI JE DOVEO DO NJEGA.
