

GENERIC ADVICE FROM AI? VAGUE QUESTIONS GET VAGUE ANSWERS.

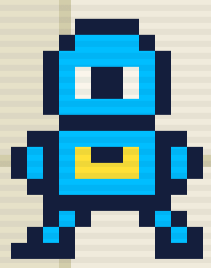

Reframing and the Cognitive Verifier Pattern

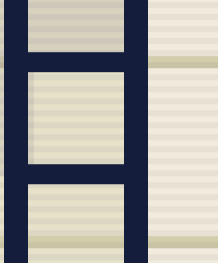

THE AI FILLS THE GAPS.

IT FILLS THEM WITH ASSUMPTIONS.

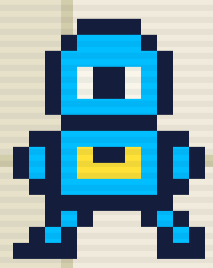

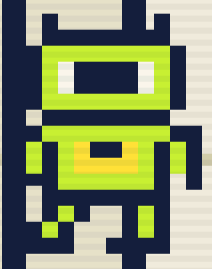

Step 1: Reframing

- [ ] Add context
- [ ] Set a clear goal
- [ ] Narrow the focus

Ask the AI to rewrite your question with these three things.

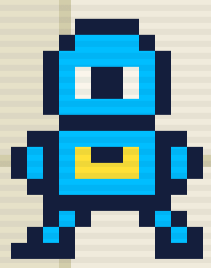

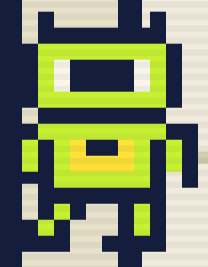

Step 2: CVP

- [ ] AI lists sub-questions
- [ ] You answer them
- [ ] AI builds your plan

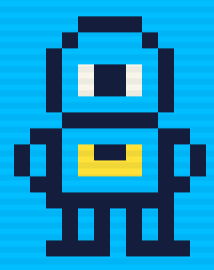

It asks instead of guessing, then plans from your actual situation.

REFRAME

Sharpens the question.

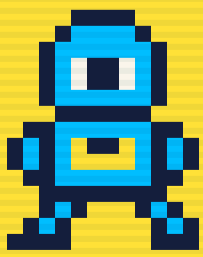

CVP

Stops the AI from jumping to conclusions.

Together they turn AI from a search engine into a thinking tool.

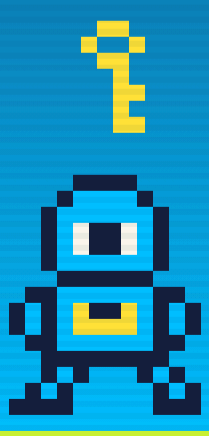

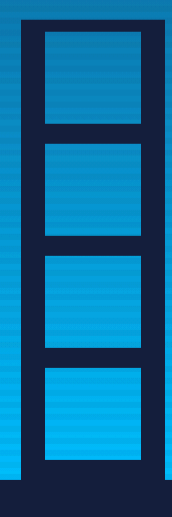

THE BETWEEN ROOF CLEAR

A SEARCH ENGINE OR A THINKING TOOL.
