

AI THAT ANSWERS. AI THAT GETS WORK DONE.

The difference between them is a loop.

M E T A X I S

WITHOUT A LOOP,
AI IS SMART
BUT STATIC.

WITH A LOOP, IT
BECOMES A
SYSTEM OF
BEHAVIOUR.

THINK

Read the goal, the current state, the limits and what is available.

NO FINAL ANSWER YET.

ACT

One concrete action. Write the text, call the tool, send the request.

ONE ACTION, ONE MOVE.

THINK

ACT

VERIFY

STEP 3 OF 3

3

VERIFY

Did the action give the expected result? If not, go back and correct it.

**NEVER CONTINUE ON
WRONG INFORMATION.**

A LOOP NEEDS RULES.

When may it continue?

When must it stop?

When does it go back?

When does it escalate?

Without them the system wanders, repeats itself and burns resources.
