

A USEFUL AI AGENT DOESN'T NEED A COMPLEX ARCHITECTURE.

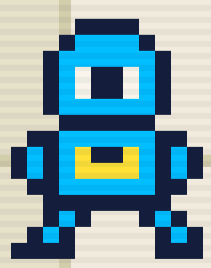

No multi-agent setup. No heavy framework.

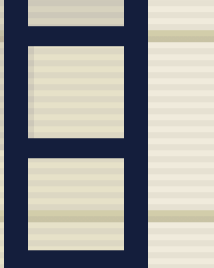

FILES GIVE IT CONTEXT.
A SIMPLE LOOP DOES THE REST.

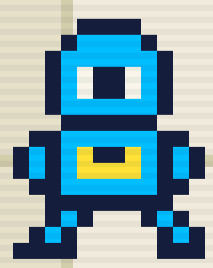

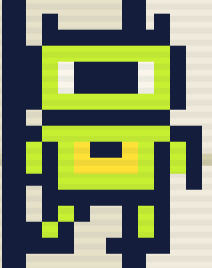

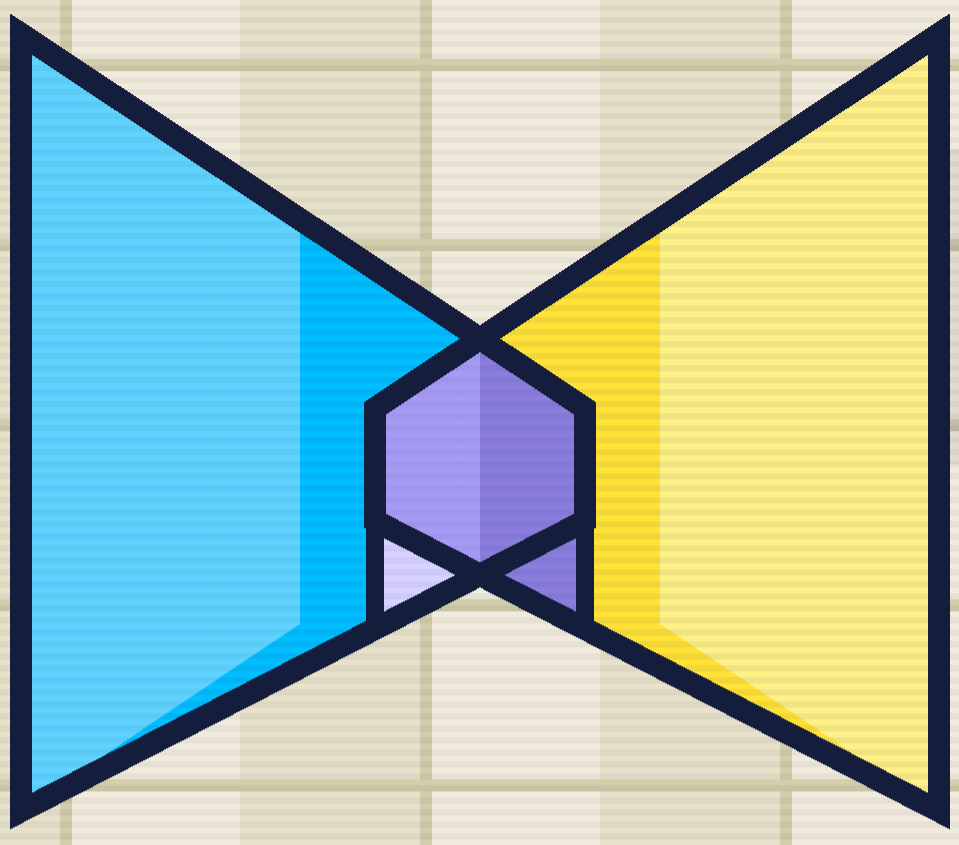

The simple loop

1. Choose an action
2. Call a tool
3. Check the result
4. Decide the next step

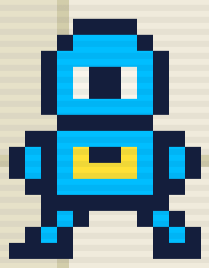

Choose an action, call a tool, check the result, decide the next step.

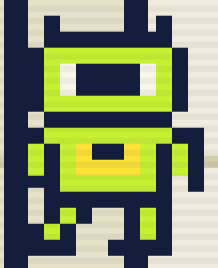

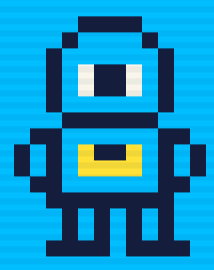

IT STOPS AND ASKS FOR MY APPROVAL.

FILES

They give the agent context, instructions and skills.

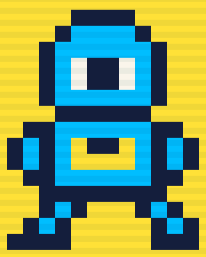

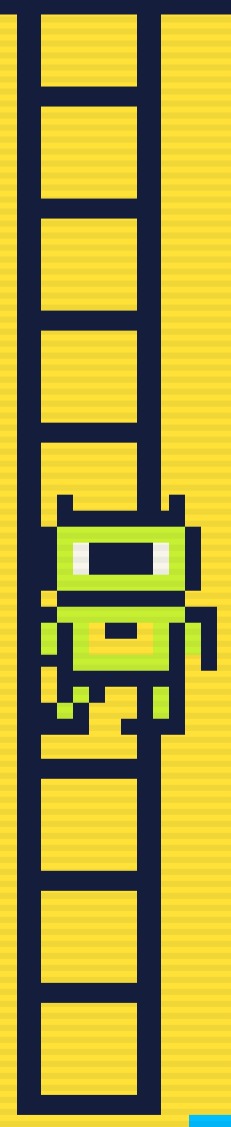

LIMITS

Files don't execute themselves. Using a tool is not permission.

Using a tool is not permission to use it.

SET ITS
LIMITS.
VERIFY WHAT IT
DELIVERS.
